

Advances in Chemical Physics, Volume 122: Dynamical Systems and Irreversibility

Leading research, perspectives, and analysis of dynamical systems and irreversibility Edited by Nobel Prize winner Ilya Prigogine and renowned authority Stuart A. Rice, the Advances in Chemical Physics series provides a forum for critical, authoritative evaluations in every area of the discipline. In a format that encourages the expression of individual points of view, experts in the field present comprehensive analyses of subjects of interest. Volume 122 collects papers from the XXI Solvay Conference on Physics, dedicated to the exploration of Dynamical Systems and Irreversibility. Ioannis Antoniou, Deputy Director of the International Solvay Institutes for Physics and Chemistry, edits and assembles this cutting-edge research, including articles such as Non-Markovian Effects in the Standard Map, Harmonic Analysis of Unstable Systems, Age and Age Fluctuations in an Unstable Quantum System, and discussion of many more subjects. Advances in Chemical Physics remains the premier venue for presentations of new findings in its field.
