

Symposium on Clinical Frontiers in Reconstructive Microsurgery (1981: Anaheim, CA) [Educational Foundation of the American Society of Plastic and Reconstructive Surgeons, Vol. 24]

Symposium on Clinical Frontiers in Reconstructive Microsurgery gives a picture of the field, updated to 1984, at a time when microsurgery made great advances in solving reconstructive problems of all parts of the body. The contributing microsurgicians come from ten nations on four continents, and their backgrounds are in plastic surgery, orthopedic surgery, general surgery, and neurosurgery. They represent a majority of the leading microsurgery centers of the world. The symposium took place 15 years after the first experimental digital replantation, 12 years after the first clinical digital replantation, 8 years after the first clinical free flap of omentum with skin graft, and 7 years after the first clinical free flap of skin and subcutaneous tissue. The pioneers who achieved these landmarks are on the roster of authors. They guide us through innovative techniques, instruct us in monitoring, and warn us of potential pitfalls, covering reconstructive problems from head to toe.
