

Dynamics and Biogeochemistry of River Corridors and Wetlands (IAHS Proceedings & Reports) (Iahs Publication)

Focused on the biogeochemistry of the riverbank with special reference to data observation, modelling, and attempts to restore such environments. The contents are divided into four themes: Organic carbon in upland wetlands and in flood-plain rivers; Nutrients in the river corridor and wetland environment; River corridor zonation attributes, such as seasonal water table fluctuation and vegetation dynamics; and River corridors and ecosystem health. The International Association of Hydrological Sciences is the worlds premier member-based organization promoting the study and practice of Hydrology. Our books are authored, edited and produced at the highest level of quality, with the most current and thorough research. Our publications and our work advance the science and the professional practice of Hydrology in a variety of Science and Engineering fields around the world. The areas that we publish in include: -Ground water -Surface water -Snow and ice hydrology -Drought and desertification -Runoff modelling -Watershed -Remote sensing -Water quality -Water resources and management -Ecohydrology/hydro-ecology -Erosion and sediment -Tracer hydrology
