

# Neuropsychology of Everyday Functioning (Science and Practice of Neuropsychology)

While neuropsychological testing can accurately detect cognitive deficits in persons with brain injury, the ability to reliably predict how these individuals will function in everyday life has remained elusive. This authoritative volume brings together well-known experts to present recent advances in the neuropsychological assessment of key real-world capacities: the ability to live independently, work, manage medications, and drive a car. For each of these domains, contributors describe cutting-edge tests, procedures, and interpretive strategies and examine salient theoretical and methodological issues. Chapters also review approaches for evaluating specific populations, including older adults and patients with traumatic brain injury, depression, dementia, schizophrenia, and other neurological and psychiatric disorders.
