

Cloud Computing: Data Locality issues of Data Centers

Cloud computing is getting popular and widespread over the world. So many people are using it and so many are showing interest to use it. But there is a big part of population is still hesitating to join cloud computing the reason of this is security issues. There are so many data security issues in cloud computing. Cloud is providing the Data storage as a Service to user. But user is worrying to store their data on cloud because of user don't know where is all data storing and who is assessing it? Problem is that which way is need to follow to keep the data on server. This research will help to understand that which way of data storing is well for user from multi location, in border area, in particular distance etc.
