

Cordwood

No one can go through the wide territory of Montana to-day without being strongly impressed with the wonderful growth of the great cattle growing and grazing industry of that territory. And yet Montana is but the northern extremity of the great grazing belt which lies at the foot of the Rocky Mountains, extending from the British possessions on the north to the Mexican border on the south, extending eastward, too, as far as the arable lands of Dakota, Nebraska and Kansas. Montana, at this season of the year, is the paradise of the sleek, high-headed, 2-year-old Texan steer, with his tail over the dashboard, as well as the stock yearling, born on the range, beneath the glorious mountain sky and under the auspices of roundup No. 21. I do not say this to advertise the stock growing business, because it is already advertised too much, anyway. So many millionaires have been made with free grass and the early-rising, automatic branding iron that every man in the United States who has a cow that can stand the journey seems to be about to take her west and embark in business as a cattle king.
