

The material in this book has been presented with the idea of aiding beginning coaches and beginning competitors, as well as improving the performances of advanced swimmers and divers. To this end, the technique of each stroke and dive is presented in some detail. Where technique and form are somewhat involved, the authors have attempted to present each phase in a clear, logical and orderly sequence so that both the high school and college athlete can easily understand the discussion. The diagrams presented in this book were secured almost entirely from an underwater movie study of some of the world's greatest swimmers. These underwater motion picture studies, taken through underwater windows, have opened a new technique in the swimming world.
