The laws of physics are the same for all observers in uniform motion relative to one another (principle of relativity). The speed of light in a vacuum is the same for all observers, regardless of their relative motion or of the motion of the light source. In physics, special relativity is the generally accepted and experimentally well-confirmed physical theory regarding the relationship between space and time. **Document Review & Production e-Discovery Software Relativity** Jul 12, 2016 Albert Einstein, in his theory of special relativity, determined that the laws of physics are the same for all non-accelerating observers, and he showed that the speed of light within a vacuum is the same no matter the speed at which an observer travels. **Relativity Definition of Relativity by Merriam-Webster** Relativity is a lithograph print by the Dutch artist M. C. Escher, first printed in December 1953. It depicts a world in which the normal laws of gravity do not apply. **Relativity Physics MIT OpenCourseWare** Relativity, wide-ranging physical theories formed by the German-born physicist Albert Einstein.
