

# Color Atlas of Nonhuman Primate Histology

This text provides an atlas depicting the normal histology of cynomolgus monkeys. The chapters are arranged according to organ systems, each starting with an introduction stating the essentials of structure and function of the system, followed by a description of the histology of different types of tissues with accompanying colour microphotographs. It is intended as a reference for investigators who use cynomolgus monkeys in their research, including veterinary medicine, environmental research, and the pharmaceutical industry.
