

Nanoscience: Volume 1: Nanostructures through Chemistry (Specialist Periodical Reports)

The field of nanoscience continues to grow at an impressive rate, with over 10,000 new articles a year contributing to a literature of more than half a million citations. Such a vast landscape of material requires careful searching to discover the most important discoveries. The newest edition to the Specialist Periodical Reports presents a digest of the last twelve months of the literature across the field. The volume editor, Professor Paul O'Brien (University of Manchester, UK) has drawn on some of the most active researchers to present critical and comprehensive reviews of the hottest topics in the field. Chapters include Nanomaterials for solar energy, Magnetic hyperthermia, and Graphene and graphene-based nanocomposites. There is also a special chapter on Nanoscience in India. Anyone practicing in any nano-allied field, or wishing to enter the nano-world will benefit from the comprehensive resource, which will be published annually.
