

## Taking Control: Politics in the Information Age

Taking Control offers a compelling analysis for candidates and voters who recognize that the American Dream cannot be restored by continuing a debate on government spending based on assumptions from an economic era that no longer exists. Human capital has replaced investment capital as the necessary ingredient for success in the new economic age. The most educated, adaptive and technologically proficient workers will become a new constituency for a political agenda that reflects their unique values. Unmoved by ideology or hierarchy, these knowledge or wired workers are team players who believe in sharing information and are disdainful of public policies based on outdated assumptions. Free of the cynicism and political extremism that define our current political environment, this well-documented inside story of this emerging political force reveals how the actions of a diverse citizenry will help to create a new social contract for American democracy.
