

Particle Bombardment for Genetic Engineering of Plants (Biotechnology Intelligence Unit)

Particle bombardment is an effective method for introgressing foreign genes into varieties of cultivated crops and has now been established as the method of choice for the engineering of plant species which, until recently, were viewed as unlikely candidates for genetic manipulation. This book brings together all that is known about the technique and provides a comprehensive review of principles and applications of particle bombardment.

* Includes a thorough Introduction to topic* Describes the most common bombardment techniques currently in use* Provides specific examples to give the reader an appreciation of each bombardment technique* Covers numerous model systems including legumes, cereals, woody species, ornamentals, oilseed crops, and fiber species
