

Nurse-Physician Perceptions of Collaborative Practice in Air Force Medical Treatment Facilities

This is a AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A373823. The abstract provided by the Pentagon follows: Collaborative practice has been shown to improve the satisfaction of patients/families, nurses, and physicians, produce significant cost savings, and improved the quality of care in civilian health care organizations. This study sought to determine the level of collaborative practice in Air Force Medical Treatment Facilities, as perceived by active duty nurses and physicians, and examine the impact of certain demographic characteristics on those perceptions.
