

TypeX - The Dawning Of Civilization: Youre Not Crazy ... Its The Rest Of The World. A Look At The ADHD Mind.

Hi there, If you are reading this then you have probably been diagnosed with ADHD or at least suspect that you have it. I was diagnosed a few years ago & since then, I have done a lot of heavy research into ADHD. I have found some information that you need to know. Now, If you are like me, you prefer to know the truth. You probably pride yourself as an independent thinker and do not accept others statements without satisfactory proof. Am I right? If so, then I have some knowledge & information that I would like to share with you. If I expect you to take me seriously, then I need to prove that I have something worthy of your attention. Am I right? I'd like to do that by doing a quick personality summary for you. Specifically for you. It would be pretty freaky if I could come close wouldn't it? Here goes... You have a great need for other people to like and admire you. You have a tendency to be critical of yourself. You have a great deal of unused capacity which you have not turned to your advantage. While you have some personality weaknesses... you are generally able to compensate for them. Your sexual adjustment has presented problems for you. Disciplined and self-controlled outside... you tend to be worrisome and insecure inside. At times you have serious doubts as to whether you have made the right decision or done the right thing. You prefer a certain amount of change and variety and become dissatisfied when hemmed in by restrictions and limitations. You have found it unwise to be too frank in revealing yourself to others. At times you are extroverted, affable, sociable... while at other times you are introverted, wary, reserved. Some of your aspirations tend to be pretty unrealistic. Security is one of your major goals in life... How did I do? Are you ready for the truth now? It's called the Forer Effect or the Barnum Effect. We tend to give high accuracy ratings to descriptions of our

personality that are supposed to be specifically tailored to us, but are actually vague enough to fit anyone. Our brain fills in the blanks for us by finding the association with the description. Feel free to look it up on Wikipedia or Google it. This is important for you to know because it is used against you all the time. The quickest way for someone to gain your trust is if they can identify with you. Sales and marketing use these techniques all the time. So does the consulting industry, Psychology, personality profiling, Numerology, Horoscopes, con artists... its everywhere. Psychology has gone on to identify 5 basic personality types and with a few questions, would be better able to pinpoint an even more accurate description. Think about the descriptions used in all the ADHD books & websites now. Did you notice that many of the descriptions could fit many of people around you? They should. The industry has utilized the power of the Forer effect to gain your trust by first demonstrating how well they know you, the patient. Once we are dazzled by the all knowing experts, we will more easily accept everything else they want to feed us. Maybe even convince you that you have a mental illness or a disability. Is that helpful information to know when you research ADHD information? Are you ready to hit the add to cart button so you can start reading this book now? Here is some of the stuff that I'd like to share with you; The ADHD myth Why ADHD is a gift & not a mental disorder The cure for ADHD The hidden laws of the universe How to find your soul The cause & cure for the common cold & migraine headaches Who wrote the bible & why Why you should be concerned about global warming How the history of mankind has been modified & why How your connection to God has been hidden from you & where to look How our dependence on authority has turned us into slaves How your true inner power has been hidden from you And thats all the room I have so Go ahead & add it to your cart now!
