

User Participation in Health and Social Care Research

User participation in research is still in its relative infancy with many practical, ethical, moral, methodological and philosophical questions unanswered. This text gathers together an international set of authors to explore these issues and begin to forge some practical solutions to each of these concerns. The book includes contributions on the use and application of narrative approaches, intervention and evaluation research, methodological development and quality thresholds. It provides a practical framework for all groups wishing to undertake research based on the principles and values of user participation. The book is structured around ten original case studies which explore the use of participatory methods in practice with a variety of groups across diverse health, social care and community settings.
