PC Scheme can serve as the basis for a stand-alone course in LISP or as an accompaniment to an artificial intelligence course. At MIT and elsewhere it has also been used as the computer language for the introductory course in computer science. Designed from the start to fit an academic environment, PC Scheme has gained increasing use in research for its elegance and power. It is both a good teaching language and a serious tool for producing applications and systems software. System requirements: IBM PC, PC/XT, or AT as well as IBM personal system/2, TIs Professional, Portable Professional, or Business-Pro computers. 512K minimum memory. Some examples in the Users Guide require additional graphics hardware such as a color graphics adaptor. Includes diskette for IBM or TI systems
